SUMMARY

Third-year CS student and DevOps Intern with hands-on experience in production infrastructure, automated backup systems, and AI-powered developer tooling. Builds and maintains containerized cloud-native services, authors shell automation for production environments, and contributes to open-source security tooling. Passionate about systems programming, developer tooling, and open source.

EDUCATION

Manipal University Jaipur

B.Tech, Computer Science & Engineering | CGPA: 8.06

Jaipur, India

2024 – 2028

EXPERIENCE

DevOps Intern

Aug 2025 – Present

Software Development Centre, MUJ

Jaipur, India

- Led end-to-end deployment of SSO (**Authentik**) and knowledge base (**Outline**) infrastructure from scratch in a 3-person team.
- Authored a **Bash** script backing up 7 production databases (PostgreSQL, MongoDB, MariaDB) and Docker volumes, syncing snapshots to bare-metal over **Tailscale** via rsync on a cron schedule with 7-day retention.
- Optimized CI/CD pipelines with **Docker layer caching** across 10+ repositories; patched a critical **Next.js CVE** across 5 production services with zero downtime.
- Containerized and deployed cloud-native services using **Docker**, **Caddy**, and **Cloudflare** reverse proxy.

PROJECTS

GoalPost | Goal Setting & Tracking Portal | Next.js 14 • TypeScript • Supabase • Microsoft Entra ID Hackathon — Solo

- Full-stack OKR platform with **role-based access** (Employee / Manager / Admin), **Microsoft Entra ID** SSO via OAuth 2.0, system-enforced goal validation, and admin audit logging.
- Shipped QoQ analytics dashboard, email notifications via Resend, and escalation module — entire stack on permanent free tiers (\$0/month).

DevLog | AI-Powered Code Review Assistant | Python • Textual • Ollama • SQLite

- Local-first CLI/TUI tracking Git commits via hooks, analyzing diffs with local LLMs and **semantic search** (all-MiniLM-L6-v2) across 39+ commits.

BrokeBuddy | AI Finance Advisor | FastAPI • Llama 3 • Plaid API • Docker Hackathon Finalist

- Full-stack financial advisory app with **JWT auth**, **Plaid** bank integration, Llama 3 inference, and **Prophet**-based forecasting in a Dockerized multi-container deployment.

OPEN SOURCE

Honeynet Project | EventHorizon | github.com/honeynet/eventhorizon

- Added real-time attacker input capture to the **Telnet tarpit** in **C** — non-blocking **read()** after each IAC write, sanitizing non-printable bytes and emitting per-keystroke metrics via **sendMetric**.
- Extended **Go** Prometheus exporter with a **telnet_pit_input** CounterVec; PR merged to main by Honeynet maintainers.

TECHNICAL SKILLS

Languages: Python, Bash, TypeScript, Go, C, C++, Java

Frameworks & Tools: FastAPI, Next.js, Docker, Caddy, Git, GitHub Actions, Textual, Rich, httpx

AI / ML: Ollama, sentence-transformers, Llama 3, Mistral, Prophet

DevOps: Docker Compose, Cloudflare, Tailscale, Prometheus, Grafana

Databases: PostgreSQL, MongoDB, SQLite, Supabase

Platforms & Editors: Arch Linux (Hyprland/Wayland), Windows, Neovim, VS Code

CERTIFICATIONS

▷ **Data Structures and Algorithms using Java** — NPTEL · IIT Kharagpur

Oct 2025

▷ **Python for Data Science, AI & Development** — IBM

May 2025

▷ **Introduction to Git and GitHub** — Google

May 2025

▷ **Database Foundations** — Oracle Academy

Nov 2025
